

Lazyclick

Add **WhatsApp Login** to your app/website

Free Forever

No OTPs

Fast & Secure

[Login with WhatsApp](#)

Why WhatsApp Login?

Increased conversion

Streamline user verification and turn more leads into customers

Protect your users

Do away with OTPs, prevent account takeovers with WhatsApp

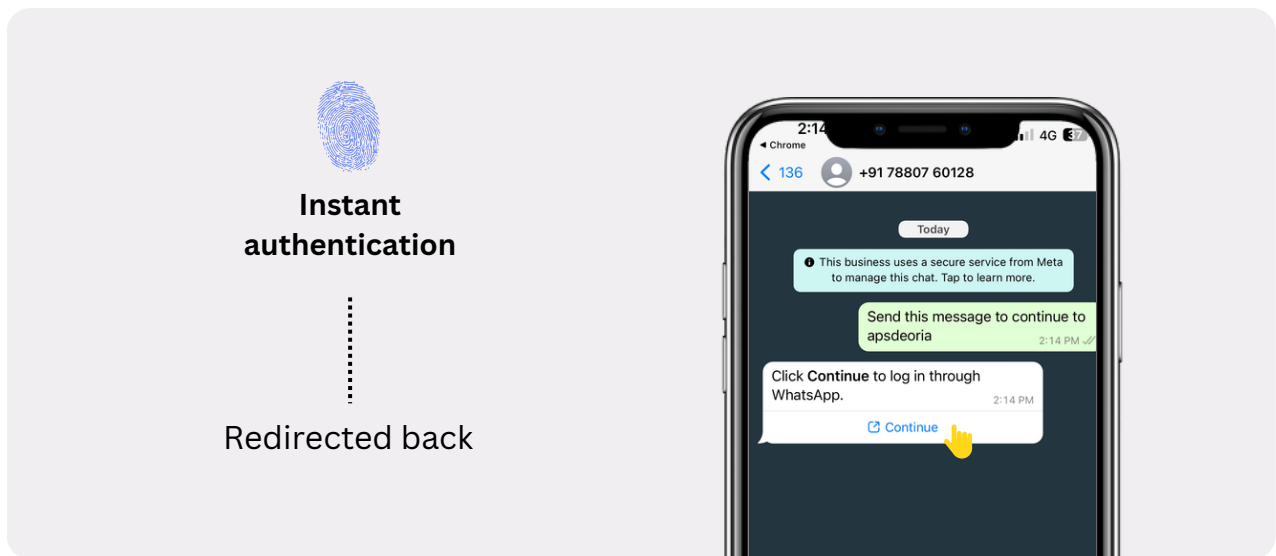

Improve user experience

Seamless phone verification process for a delightful experience

The diagram illustrates the redirection process from a login page to WhatsApp. On the left, a login form is shown with fields for 'ID' and 'Password', and a 'Submit' button. Below the form, a vertical dotted line indicates the flow of the process. To the right of the line, the text 'Redirected to WhatsApp' is displayed. On the far right, a smartphone screen is shown displaying the WhatsApp login interface. The screen features the WhatsApp logo at the top, followed by the text 'Sign in to apsdoria with Lazyclick'. Below this, there is a green button with the WhatsApp logo and the text 'Continue with Whatsapp'.

Integration Guide

Choose your platform

Website

Javascript

App

Android

Javascript

Install the Lazyclick SDK

Copy-paste this code on your login page

```
<script type="text/javascript"
src="https://www.lazyclick.in/lazyclick.js"></script>

<script type="text/javascript">
    lazyclick(wauser) {
        console.log(wauser);
    }
</script>
```

Android

Install the Lazyclick SDK

Step 1: Open settings.gradle/build.gradle(project)

```
repositories {  
    google()  
    mavenCentral()  
    maven { url 'https://jitpack.io' }  
  
    maven {  
        url = "https://maven.pkg.github.com/lazyclick/lazyclick"  
        credentials {  
            username = "lazyclick"  
            password = "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"  
        }  
    }  
}
```

Step 2: Add dependency inside build.gradle(app)

```
implementation 'com.lazyclick:lazyclick-android-sdk:1.0.0'
```

Step 3: Inside onCreate() on your Activity/Fragment

```
override fun onCreate(savedInstanceState: Bundle?) {  
    super.onCreate(savedInstanceState)  
    setContentView(R.layout.activity_main)  
  
    // Do this on a button click where you want to login  
    Lazyclick.instance?.initFree(this) // Initialize  
  
    Lazyclick.instance?.setListener(object : DataListener { // Callback  
        override fun onMessageReceived(jsonString: String) {  
            Log.i("TAG", "onMessageReceived: $jsonString")  
        }  
  
        override fun onMessageSent(jsonString: String) {  
            Log.i("TAG", "onMessageSent: $jsonString")  
        }  
  
    })  
}
```
